SUMMARY

Senior Software Engineer and emerging Tech Lead with 4+ years of experience delivering scalable React and Next.js applications for enterprise SaaS products. Experienced in driving end-to-end feature delivery, from facilitating product feasibility discussions and translating requirements into structured developer guides, to coordinating parallel FE/BE workstreams that fast-track releases without compromising quality. Proven in mentoring engineering teams, leading internal tech talks, architecting modular frontend systems, and implementing performance and caching solutions that reduce costs and improve user experience. Adept at bridging Product, Design, QA, and Engineering to ship the right thing, fast.

SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, SASS, Java, Kotlin, SQL

Frontend Frameworks: React, Next.js

State Management & Data: Redux, Zustand, React Query, GraphQL

UI Libraries: Tailwind CSS, shadcn/ui, Radix UI, Ant Design, Material UI, Framer Motion

Backend & Cloud: Node.js, Express.js, Firebase, Supabase, Convex, Spring Boot

Mobile: Android (Kotlin, Java, XML), Retrofit, Dagger, Glide

Analytics & Quality: Firebase Crashlytics, Adjust SDK, SonarQube, Storybook, CI/CD

WORK EXPERIENCE

Axiata Digital Labs Oct 2022 – Present

Senior Software Engineer (Promoted from Software Engineer) — Colombo, Sri Lanka

Software Engineer: Oct 2022 – Mar 2025 → Senior Software Engineer: Mar 2025 – Present

- Conducted technical feasibility discussions with Product and UI/UX teams before sprint planning, defining scope and surfacing constraints, reducing mid-sprint rework across feature releases.
- Resolved a critical app performance bottleneck by decomposing a monolithic API with a large payload into targeted, fine-grained endpoints and implementing a CMS-driven dynamic TTL caching layer, reducing redundant backend hits, cutting API costs for the client, and delivering a significantly faster, smoother user experience across data-heavy screens.
- Facilitated feature kickoff discussions with the Business team to clarify requirements and define the fastest path to delivery, then translated outcomes into structured implementation guides for developers, covering build steps, developer testing checklists, and QA handoff criteria, resulting in zero rework, minimal bugs, smooth QA cycles, and on-time releases.
- Fast-tracked delivery of a critical, time-sensitive business feature by parallelising FE and BE development, mocking API responses on the frontend to unblock UI development from day one, coordinating a partial QA release for UI validation ahead of full API integration, and staging handoffs to progressively reduce QA testing time, delivering the feature on schedule without compromising quality.
- Delivered an internal tech talk titled *"Exploring the Future of Coding with Cursor AI"* at Axiata Digital Labs, conducting a hands-on live demo showcasing how to leverage AI-assisted development with Cursor to accelerate day-to-day feature delivery, driving team-wide awareness and adoption of modern AI tooling.
- Mentored junior developers and interns through structured weekly 1:1s, PR reviews, and coding standards enforcement, improving average PR review cycle time and reducing post-merge defect rates.
- Co-led frontend architecture decisions for the Axonect Enterprise Product Catalog, introducing a modular component strategy across product teams that reduced UI code duplication and accelerated feature delivery cycles.
- Resolved 20+ critical frontend bugs across Axonect products, reducing user-reported UI errors and improving overall application stability.
- Diagnosed and resolved Firebase Crashlytics-reported Android crashes on SmartNas, triaging stack traces and deploying fixes that significantly reduced the app crash rate.
- Integrated Adjust SDK event tracking across SmartNas Android, defining custom funnel events to support marketing attribution and user behaviour analytics.

- Resolved SonarQube-flagged issues, including code smells, security hotspots, and high cognitive complexity across multiple codebases as part of a team-wide quality gate initiative.

Tribird | Norway Mar 2025 – Aug 2025 | (Part-time, Remote)

Frontend Developer

- Engineered Wildwood Packiyi, a full-stack inventory and packaging management platform using Next.js 15, React 19, TypeScript, and Tailwind CSS, enabling real-time inventory tracking and streamlined order workflows.
- Integrated GraphQL with React Query and Zustand for type-safe data fetching, optimistic updates, and intelligent caching, reducing redundant API calls on high-traffic screens.
- Developed interactive dashboards and data tables (Recharts, React Table) with advanced filtering, bulk operations, and real-time updates.
- Leveraged Next.js SSR, dynamic routing, and code splitting to improve SEO and reduce initial page load times.

Informatics International Mar 2022 – Oct 2022

Associate Software Engineer — Colombo, Sri Lanka

- Developed user interfaces for enterprise products using React, TypeScript, Material UI, and Redux, ensuring design consistency and cross-browser compatibility.
- Partnered with 2 UX designers and backend teams in Agile sprints to define API contracts and component specs, aligning on integration requirements before development.
- Optimized Redux-based state management and resolved 10+ front-end issues, improving usability and reducing reported UI defects.

PROJECTS

JSON Vibe – Shareable JSON Editor | jsonshare.org Personal Project

Tech Stack: Next.js 14, React, TypeScript, Tailwind CSS, CodeMirror 6, React Flow, Web Crypto API, LZ-String

- Built a production-ready JSON editor with real-time validation, format conversion (YAML/XML/CSV), and ERD-style schema visualization using React Flow, live at jsonshare.org with real users.
- Implemented client-side encryption and URL-based state management with LZ-String compression, enabling a secure, zero-backend architecture for shareable JSON links.
- Developed JSONPath filtering, diff viewer, and data model generator supporting 6+ languages; fully responsive mobile UI with QR code sharing and Web Share API integration.

doodleui-react | Open-source React component library | doodle-ui.netlify.app | [npm](https://npmjs.com/package/doodleui-react) | [Github](https://github.com/doodleui/react) | Personal Project

Tech Stack: TypeScript, React 18+, rough.js, Radix UI, Framer Motion, Next.js, Turborepo, pnpm, MCP, Netlify

- Built and published an open-source library (**doodleui-react**) of 55+ sketch-styled React components on Radix, with theming, dark mode, and WCAG 2.1 AA contrast auditing.
- Shipped a shadcn-style CLI (**npm install -g doodleui-react** **add** ...) that copies component source into consumer apps across npm/pnpm/yarn/bun
- Added an MCP server so AI coding agents can discover components, read prop docs, and install the library correctly

Wildwood Packiyi – Inventory Management Platform | **Tribird** May 2024 – Present

Tech Stack: Next.js, React, GraphQL, shadcn/ui, React Hook Form, Tailwind CSS, TypeScript, Framer Motion

- Engineered a full-stack inventory and order management platform for Tribird's Norway-based operations, featuring real-time data updates, advanced dashboard reporting, and bulk operations support for business users.

SmartNas – Android Application | **Smart Axiata** Jun 2024 – Present

Tech Stack: Android, Kotlin, XML, Firebase, Retrofit, MVP, Material Design, Dagger, Glide, OkHttp, SonarQube

- Built and maintained an Android application for Smart Axiata using Kotlin and MVP architecture; integrated Firebase Crashlytics for crash monitoring, Adjust SDK for attribution analytics, and SonarQube for quality enforcement.
- Led Home 4.0: customizable layout, quick menu, side drawer, plans/usage (speedometer, Opunhaha)
- Built 5G prepaid/postpaid/hybrid: landing, eligibility, coverage map, location, permission, Dynamic Links
- Built multi-account: add / switch/sign-out, TnC, AuthInterceptor 401 session recovery

SmartNas Revamp – Flutter Application | **Smart Axiata** Jun 2026 – Sep 2026

Tech Stack: Flutter, Dart, Firebase (FCM, Crashlytics), Adjust Events

- Notifications: delivered the in-app list and announcement detail sheets, mark-as-read, unread badge on the home bell, and FCM push (device token, Firebase Android/iOS setup).
- Also integrated Adjust product events (login, SmartVIP, plans, notifications, Smart Roam), Firebase Crashlytics, and environment tokens (Adjust/Repro).

Axonect Customer Explore | RnD Mar 2023 – Jul 2023

Tech Stack: React.js, Typescript, Ant design, SCSS, CSS

- Implemented the UI for the User Management module supporting full CRUD operations, role assignment, and granular permission management for precise access control.
- Developed the UI for the Trouble Ticket Management module with complete CRUD functionality to simplify tracking and resolution of customer issues.
- Implemented the UI self-onboarding workflow, reducing administrative overhead and enabling seamless user entry into the platform.

Axonect Enterprise Product Catalog | RnD Jul 2023 - Jun 2024

Tech Stack: React.js, Typescript, Ant design, SCSS, CSS

- Implemented the UI for product federation capabilities to enable seamless integration between the product catalog and existing BSS/OSS platforms.
- Implemented a canvas-based UI with drag-and-drop functionality to design and customize product structures efficiently.
- Administered user access through Role-Based Access Control (RBAC), enhancing platform security and governance.

EDUCATION

Bachelor of Engineering with Honours in Software Engineering, Staffordshire University (APIIT Sri Lanka), 2022

CERTIFICATIONS

React – The Complete Guide 2024 (incl. React Router & Redux) | Udemy, Feb 2024
